THE CASE FOR **TAGGING**

Bracco’s Tagitol™ V (barium sulfate suspension 40% w/v, 30% w/w) was the fecal tagging Clinical Standard used in the ACRIN CT Colonography Trial.¹ Fecal tagging before CTC enhances the assessment of fecal residue in the colon and has proven efficient in lesion detection.²

**TAGITOL™ V**

barium sulfate suspension 40% w/v, 30% w/w

**THE ONLY FECAL TAGGING AGENT FOR CT COLONOGRAPHY.**
THE RIGHT CHOICE FOR CTC

TAGITOL™ V
barium sulfate suspension 40% w/v, 30% w/w

Tagitol V, the only fecal tagging agent for CT Colonography

Recognizing the role of patient compliance for effective fecal tagging, Bracco developed low volume, pleasant-tasting Tagitol V.

Distinguishing pathology from residual stool is one of the most challenging aspects of any CT exam of the colon. Even with a trained eye, experienced radiologists may have difficulty identifying stool versus pathology.

Fecal tagging before CT colonography enhances the assessment of fecal residue in the colon and has proven efficient in lesion detection.²

Simplicity for the Patient
- Small bottles for portability
- Pleasant apple flavor
- Easy to drink
- Low volume

Convenience for the Practitioner
- 3 small, prepackaged unit doses
- Easy storage
- Simple delivery to the patient

<td>Tagitol V Barium Sulfate Radiopaque Marker for Virtual Colonoscopy (each patient pack includes 3x20 ml bottles; 24 patient packs per shipping case)</td>
<td>390802</td>
</tr>
</tbody>
</table>

Indications and Usage:
Tagitol V is a low-volume radiopaque marker that blends into stool as it forms. With just a 20mL dose with breakfast, lunch and dinner the day prior to the exam, Tagitol V provides immediate, visible identification of retained feces via comparative density analysis, simplifying the distinction between tagged feces and colonic abnormality.

IMPORTANT SAFETY INFORMATION:
For use in opacifying residual stool in the colon during CTC. This product should not be used in patients with known or suspected gastric and intestinal perforation, or hypersensitivity to barium sulfate or any component of this barium sulfate formulation. Rarely, severe and occasionally fatal allergic reactions have been reported following administration of barium sulfate contrast agents.
